

Triple Black Collector Range

Designed to Withstand the Test of Time

Australian Made and SRCC Certified*

Triple Black is designed to withstand harsh Australian conditions, the Boss Triple Black Collector range is manufactured in our Mulgrave Plant in Melbourne, Victoria

Boss Solar - Is the Manufacturing Name behind Most of the Largest and Most Respected Solar Pool Heating Installation Companies throughout Australia

Triple Black Collectors are the collectors of choice for many high end pool professionals across Australia, the United States and Europe due to its certification by the SRCC Solar Rating & Certification Corporation in Florida, USA.

The US has a tough regulatory accreditation standard which all solar systems must attain. This is done via a process of rigorous testing and heating efficiency evaluation prior to their being released in their market place.

When combined with the Boss TufReturn® and TufMan® manifolds, the Boss 10 tube Triple Black Collector is the only Australian made system to be certified by SRCC.

Boss Solar's excellent technological capabilities, procedures and high tech equipment have resulted in a product that is of the highest repeatable standard and tolerances.

The Advantages of a Punched Profile...

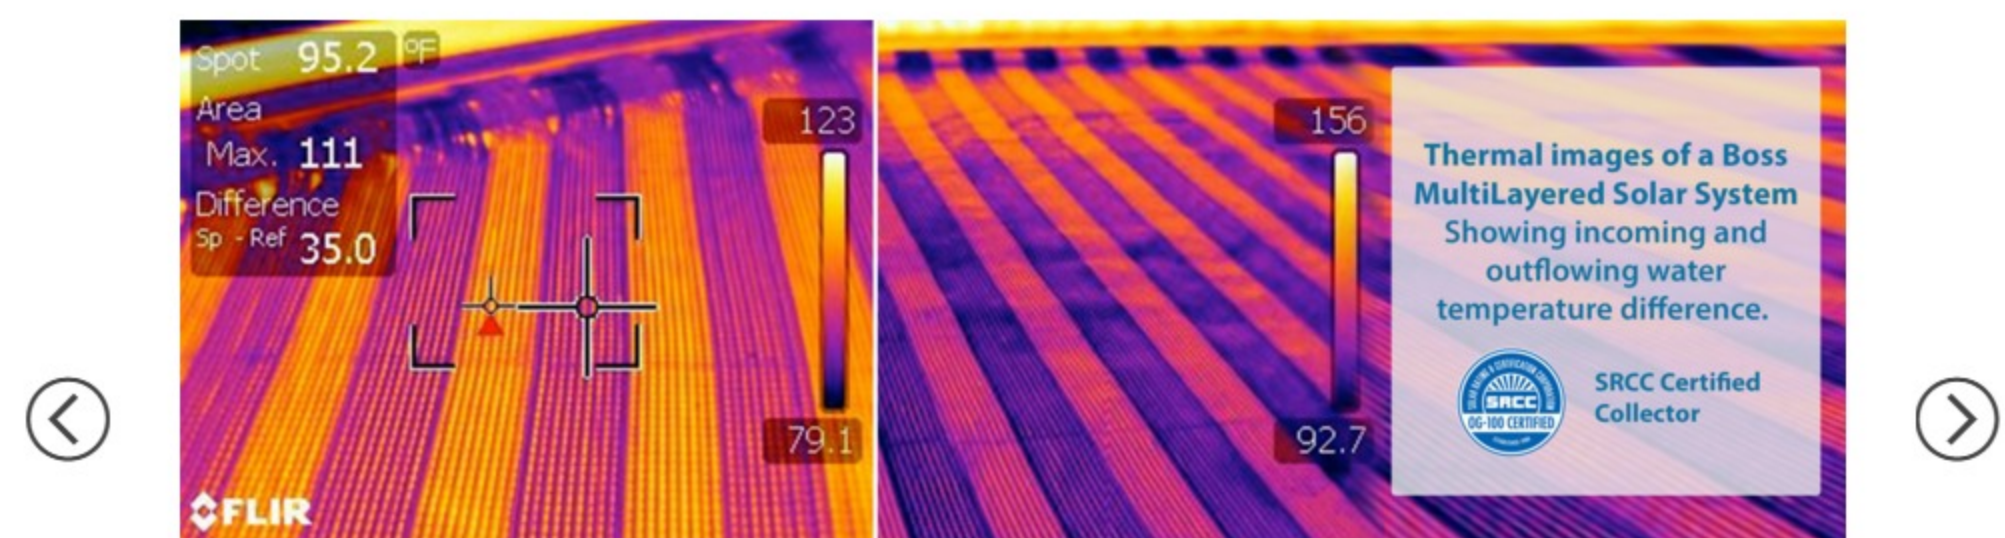

Boss Solar's 10 tube Triple Black collector is available in non-punched or punched profiles.

The main advantages of punching a hole in the web of the collector are to provide excellent adhesive qualities, and to enable rainwater to quickly and efficiently drain down the roof.

The extra adhesion is gained as the silicone pops out of the punched web holes, it creates a lock between the roof and the collector, making it virtually impossible to be displaced by strong winds.

Punching the web of the profile, also allows the Pool Professional to quickly, easily, and neatly strip the collector webbing, saving both time and money.

The holes in the webbing of the collector mean that during rainy days, rain water can easily drain through the holes, rather than possibly remaining on surface of the collector.

The only Australian Manufactured Solar System to have the US SRCC Certification

Combining The Best Into One.....

MultiLayered® Solar Collector is the latest scientific development in Solar Pool Heating. This patented technology (exclusive to Boss Solar) engages high tech materials and processes to develop the most technologically advanced solar pool heating range available.

Our unique MultiLayered® Co-Extruded Solar Technology sets Boss well apart from manufacturers who are limited to offering collectors made from a single material (MONO) only.

Any single material collector is simply a compromise on both Performance and Longevity.

Take advantage of technology, invest in a Boss Solar MultiLayered® system today.
